Problem: Food Irradiation
Upon completion of this module, the student should:
Describe in his or her own words the procedure of food irradiation.
Evaluate arguments from both sides of the controversy surrounding food irradiation.
Determine his or her personal stance on the issue of the safety of irradiated foods.
Develop and articulate an independent conclusion regarding the safety of irradiated foods.
Describe in his or her own words the outcomes of food irradiation in terms of food safety based on empirical evidence.

Article Title: Ai Weiwei: Under Construction
Body Copy:
Ai Weiwei: Under Construction is the inaugural exhibition of Sherman Contemporary Art Foundation (SCAF) for 2008.
Dr Gene Sherman, Chairman, Executive Director of SCAF, says: 'Ai Weiwei's artistic output, based on the formulation of ideas, is interwoven with his political thinking and illuminates for the audience the internal struggles China currently faces, as well as deep human concerns.'
With two works, the massive commissioned installation Through, 2007–08, which fills the entire gallery space, and Fairytale – Film, 2008, Ai Weiwei continues his cultural iconoclasm while at the same time creating a DVD that shows art and life combined in a multi-layered gesture of exceptional generosity.
In conceptualising Through, Ai Weiwei's realises, on a grand scale, an artwork that uses deconstructed Qing Dynasty (1644–1911) tables and ancient temple beams refashioned into complex relationships. These relationships are symbolic and structural, referencing the destruction and reinvention that is a recurring theme in Chinese history, and described by curator and catalogue author Dr Charles Merewether as 'ruins in reverse'.
Karen Smith, viewing the work in Ai Weiwei's Beijing studio before it was de-assembled for

commissioned by Sherman Contemporary Art Foundation, Sydney
courtesy the artist, Gallery Barry Keldoulis and Sherman Contemporary Art Foundation, Sydney
SHERMAN CONTEMPORARY ART FOUNDATION (SCAF) presents an immersive new installation by Jonathan Jones.
Six walls covered in blue tarpaulin glow with filtered light from fluorescent tubes articulated in a continuous chevron design. The chevrons are derived from elements of traditional Koori (South Eastern Aboriginal) line work and resonate with Western minimalism.
While visitors are able to walk around the perimeter of the installation and bathe in its light, they are allowed only sightlines between each wall. This lack of physical access in untitled (the tyranny of distance) sets up a dynamic of intimacy versus exclusion alluding to a sense of longing, alienation and lost or secret histories.
untitled (the tyranny of distance) was conceived following the implementation of the continuing Northern Territory Intervention.[1] It is concerned with access and its prohibition and is particularly relevant at a time of changing government policies in relation to Indigenous housing.
2. SCAF OUT-SITE
genesis, 2008

This is a demonstration of the Bravo text editor.

YCombinator has an *Alto II XM*, but until that system is running, the salto simulator can be used to demonstrate Bravo.

Bravo is a WYSIWYG text editor with many of the features of modern word processors. Text can be selected with the mouse and formatting applied. For instance text can be justified. The left and right margins line up nicely, and the text will appear the same if it is printed on a laser printer.

Bravo supports multiple fonts and character styles such as **bold** and *italics*. It supports the Greek alphabet αβξδεφγ as well as many special characters such as ✖↝©∂≃↔⇒.

The upper portion of the display holds status information, while the lower portion contains the text. The Alto's display is oriented vertically like an 8½ by 11 piece of paper, making it suitable for page layout.

Video provides a powerful way to help you prove your point. When you click Online Video, you can paste in the embed code for the video you want to add. You can also type a keyword to search online for the video that best fits your document. To make your document look professionally produced, Word provides header, footer, cover page, and text box designs that complement each other. For example, you can add a matching cover page, header, and sidebar. Click Insert and then choose the elements you want from the different galleries. Themes and styles also help keep your document coordinated. When you click Design and choose a new Theme, the pictures, charts, and SmartArt graphics change to match your new theme. When you apply styles, your headings change to match the new theme. Save time in Word with new buttons that show up where you need them.
To change the way a picture fits in your document, click it and a button for layout options appears next to it. When you work on a table, click where you want to add a row or a column, and then click the plus sign. Reading is easier, too, in the new Reading view. You can collapse parts of the document and focus on the text you want. If you need to stop reading before you reach the end, Word remembers where you left off - even on another device. Video provides a powerful way to help you prove your point. When you click Online Video, you can paste in the embed code for the video you want to add. “Microsoft Word, I reasoned, was the most widely used piece of writing software in the world, the No. 2 pencil of the digital age.”

– Matthew Kirschenbaum, (Track Changes: A Literary History of Word Processing)

February 9, 1894

The Starkfield Times

Local Couple Found After Sledding Accident

Recently, a young couple was found near the church, crashed into a tree and unconscious. We have no reason to believe there is any foul play involved, but police are on the case. These youngsters were found to be our very own Ethan Frome and our newer townsperson, Mattie Silver. "It's like Romeo and Juliet," says Mrs. Hale one afternoon during an interview. "Too bad, though, they're going to wish they were dead after Zeena has at them!" Several civilians have visited the pair at their home to express their condolences. We fear there is not much hope for young Mattie Silver. It seems she suffered the brunt of the blow, although she was found on the back of the sled.

"From what evidence that that can be gathered," says the head police chief, "they lost control, and it was dark, so there was no possible way they could have known." Snow has been shoveled away from the scene, but the danger still lies at the base of the hill. Will that deadly tree be allowed to nearly take another life? Or will we take action and destroy the hazard before it's too late? One thing is for sure, though, we will definitely be more careful around that deathtrap known simply as a tree.

Help Wanted

Experienced horse driver. Ready to work and flexible with times. If interested, I will be at Mrs. Hale's store from 3-5 Monday evening.

In home doctor, must have prior medical experience. If interested, find a way to the Frome Mill

Cafe Ria Press Release
Two New Locations
Cafe Ria is proud to announce the opening of two new locations in the Portland area. The first cafe, set to open in September 2013, will be run by Caitlin Roran. Our second cafe, which will include paninis for both lunch and dinner, will be run by Lizzy Astley.
With these new openings, we hope to better serve the needs of customers in all parts of the city. Since day one, Cafe Ria has been committed to the highest quality espresso, cappuccino, and hand-made biscotti in the Portland area. With 22 employees and three locations across the city, our promise to you is "Great food, friendly faces, and a comfortable chair."

Great job, Peter. Love the photo of Sue. I feel like we should bring up the quality of our coffee explicitly because people will be concerned that we are growing too fast.
Does that work for you two?
Looks great to me. Peter?
This looks good. I am excited for the announcement tomorrow!

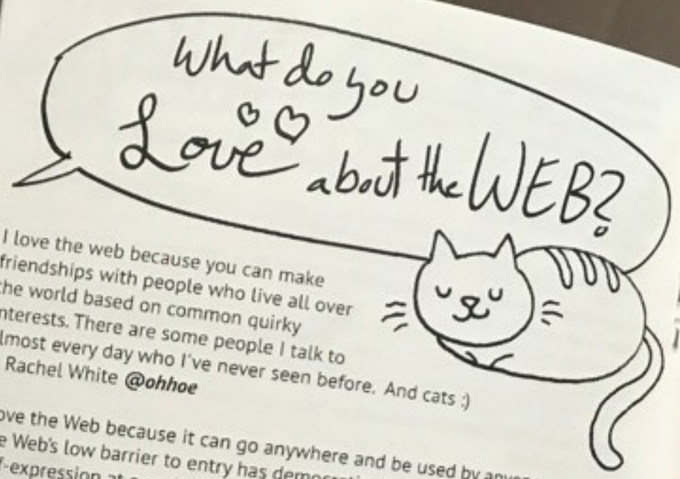
The future of authoring tools

Is the WWW

We live in a connected world

The Web browser has evolved around as much as it has shaped today's devices. The authoring tools of the future will largely target the Web.

What is the Web for?



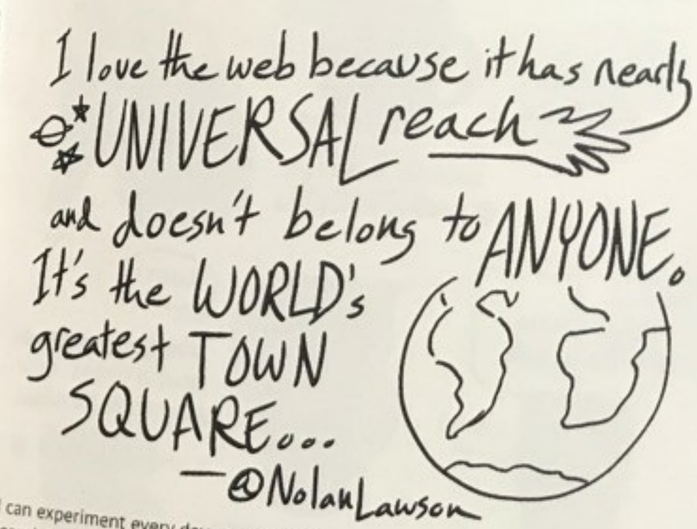
I love the web because you can make friendships with people who live all over the world based on common quirky interests. There are some people I talk to almost every day who I've never seen before. And cats :)
– Rachel White **@ohhoe**

I love the Web because it can go anywhere and be used by anyone. The Web's low barrier to entry has democratized communication and self-expression at a scale that was previously unimaginable. Sure, such easy access has occasionally brought out the worst in people, but it has also connected us in very immediate and important ways that enable us to recognize our shared humanity and work together for a better world.
–Aaron Gustafson **@AaronGustafson**

The web allows for collaboration on a scale that wasn't possible before. I can easily collaborate with people across the world on projects, and part of the beauty of that is they can bring their differences to the table.
–Clay Martin **@instylevii**

I love the web because it puts ideas, culture, people, information, tools, and so much more at your fingertips with the lowest friction and greatest freedom of any platform that's out there. The web's openness and low barrier-to-entry germinate amazing content and experiences, which in turn inspire me to push the web further so that even more amazing experiences can be created tomorrow.–Jacob Rossi **@JacobRossi**

The web has opened doors for me that I never imagined. I love how it gives access to so much information to better oneself in any number of ways. I've discovered locations I'd like to visit, hobbies I'd like to try out and had in depth conversations with people on the other side of the world. I think my favorite part of the web, is it feels as though anything that you can think of, you can build—there is no limit to what you can accomplish.
–Greg Whitworth **@GregWhitworth**



I can experiment every day and instantly share with the world what I'm learning.–Frédéric Perrin **@blustemy**

I love the web because it connects me to people I might not have had the chance to connect with otherwise. Oh and cats.
–Stacey Mulcahy **@bitchwhocodes**

JFG's home page at InfoDesign
This home page demonstrates some simple concepts of the World-Wide Web infrastructure for global information sharing.
Today, I showed Tim's original Web browser to Marc Weber. I just took some notes about him and linked them to his name on the fly.
I use this World-Wide Web editor exactly like any word processor, with the power to create links from sensitive pieces of text to other places, for instance to personal notes or to any information source in the world.

“It has taken a long time for technology to catch up with Berners-Lee’s original vision. The first ever web browser was also an editor, making the web an interactive medium […]. With recent phenomena like blogs and wikis, the web is beginning to develop the kind of collaborative nature that its inventor envisaged from the start.”

The web browser as universal meta platform

“Ever since Writely (now called Google Docs) launched ten years ago, I’ve believed that all software should be online, real-time and collaborative. Creative tools haven’t made the leap because the browser has not been powerful enough. Now, with WebGL, everything has changed.”

– Dylan Field, CEO Figma

If we accept this premise

How to empower non-technical creators?

“Developing personal computing tools to give individuals the power to create, to educate, to learn, to entertain, and to communicate, has been my passion for all these years.”

— Bruce Horn

How to empower non-technical creators?

Through smarter tools

Part 2

Designing tools to build the web

If the future of authoring tools is the Web

What is a document?

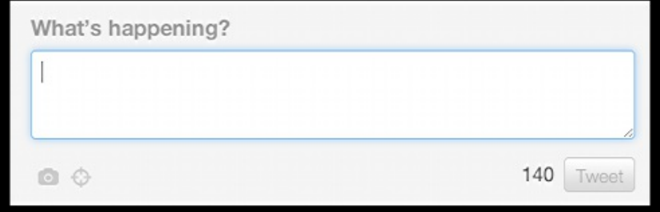
Web native documents

Characteristics

- universally accessible
- multimedia
- fluid
- semantic
- reduces to plain text

What do we use to build the web today?

And what are the building blocks of interaction?



What's happening?

Welcome on Roadiz Default Theme.
Subtitle
Hit the road!
Content
Roadiz is a polymorphic CMS based on a node system which can handle many type of services. It's based on Symfony components, Doctrine ORM, Twig and Pimple for maximum performances and security.
Roadiz node system allows you to create your data schema and to organise your content as you want. We designed it to break technical constraints when you create tailor-made websites architectures and layouts. For example: imagine you need to display your graphic design portfolio and… sell some t-shirts. With Roadiz you'll be able to create your content forms from scratch and choose the right fields you need. Images and texts for your projects. Images, texts, prices and even geolocation for your products. That's why it's called polymorphic.

Jake Jorgova

Squarespace Web Design

For those that don't know, Squarespace is a new website design tool that has become extremely popular over the past few years.

This tool is absolutely amazing and I use it every single day for my personal website, and nearly all of my client websites. In fact I make a majority of my income doing Squarespace consulting.

Over two years ago I began building websites on Squarespace, and I have seen it grow and morph over time into one of the most robust website platforms on the internet.

Why Squarespace is so great

Anyone who as ever built a website before, or hired someone to build it knows that it can be extremely expensive. A custom coded site or Wordpress site can generally cost $3,000 and up. Then you h... ...ay expensive costs to maintain that site overtime with the constantly changing internet.

yo-fool

Hello there

I don't know the solution to cultivating a culture of good taste, but I believe lessons can be learned from the emergence of industrial design, about seventy years ago.

DIY Yahoo! Resignation Letter
Mihai
honan.net/yahoo/
YAHOO!
Dear Mr. Yang,
It is with great sadness that I ask you to accept this letter as my official resignation from Yahoo!
My last day here will be two weeks from today, after which time I shall be taking a position with Google.
As you know, for some time now I have been desiring more time with my family and thus I feel the time has finally arrived for me to move on. And of course, I would not be forthright if I failed to mention how much it distressed me to see some of the moves management has made in recent weeks.
For example, I found the recent advertising agreement reached with Google to be unwise. Furthermore, as I have watched management squander once-valuable properties such as Flickr, I have come to realize that management does not seem to fully understand social media.
Thus, I am tendering my resignation as of today. If you would like me to sign a non-compete clause, I will be glad to do so, seeing as my new position is in a different market segment.
Sincerely,
YOUR NAME HERE

Article Title: Ai Weiwei: Under Construction

Body Copy:

-- Format -- | [not indent] | HTML

Ai Weiwei: Under Construction is the inaugural exhibition of Sherman Contemporary Art Foundation (SCAF) for 2008.

Dr Gene Sherman, Chairman, Executive Director of SCAF, says: 'Ai Weiwei's artistic output, based on the formulation of ideas, is interwoven with his political thinking and illuminates for the audience the internal struggles China currently faces, as well as deep human concerns.'

With two works, the massive commissioned installation *Through*, 2007–08, which fills the entire gallery space, and *Fairytale – Film*, 2008, Ai Weiwei continues his cultural iconoclasm while at the same time creating a DVD that shows art and life combined in a multi-layered gesture of exceptional generosity.

In conceptualising *Through*, Ai Weiwei's realises, on a grand scale, an artwork that uses deconstructed Qing Dynasty (1644–1911) tables and ancient temple beams refashioned into complex relationships. These relationships are symbolic and structural, referencing the destruction and reinvention that is a recurring theme in Chinese history, and described by curator and catalogue author Dr Charles Merewether as 'ruins in reverse'.

Karen Smith, viewing the work in Ai Weiwei's Beijing studio before it was de-assembled for

Write
Hemingway App makes your writing bold and clear.
The app highlights lengthy, complex sentences and common errors; if you see a yellow sentence, shorten or split it. If you see a red highlight, your sentence is so dense and complicated that your readers will get lost trying to follow its meandering, splitting logic — try editing this sentence to remove the red.
You can utilize a shorter word in place of a purple one. Mouse over them for hints.
Adverbs and weakening phrases are helpfully shown in blue. Get rid of them and pick words with force, perhaps.
Phrases in green have been marked to show passive voice.
You can format your text with the toolbar.
Paste in something you're working on and edit away. Or, click the Write button and compose something new.

ContentEditable

To further simplify the work of sites and frameworks, new types of contentEditable simplifies default behavior to text input only, while providing local-specific information on what a user intends such as to create newlines, delete content, or format it. This allows sites to easily provide their own behaviors without needing to handle complex text input like IMEs.

3. Framing the Problem

- ContentEditable is **too complex and buggy** to be usable as-is
  While we could solve this by spec'ing contentEditable's behavior, the remaining issues here cause us to look in a new direction instead.
- ContentEditable **does not easily enable the wide range of editing scenarios**. It is high-level and not supportive of the principles listed in the Extensible Web Manifesto.

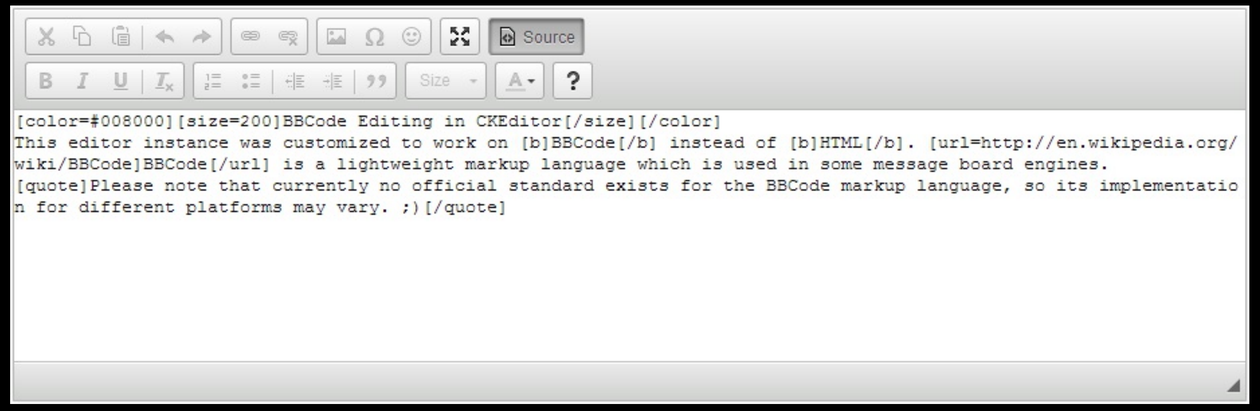
4. Use Cases

- **Semantic HTML WYSIWYG editor** for a blogging platform or email. (link to mail)

  The editor needs to able to add both semantic and visual annotation to the document as it will be published as a blog. Headings are to be marked up with h1. h2, etc... and each acronyms, abbreviations, and so forth

We keep finding clever ways to avoid it

BBCode



Source
Size
[color=#008000][size=200]BBCode Editing in CKEditor[/size][/color]
This editor instance was customized to work on [b]BBCode[/b] instead of [b]HTML[/b]. [url=http://en.wikipedia.org/wiki/BBCode]BBCode[/url] is a lightweight markup language which is used in some message board engines.
[quote]Please note that currently no official standard exists for the BBCode markup language, so its implementation for different platforms may vary. ;)[/quote]

February **2011** Codemirror (code editor) 2.0 (no longer based on contenteditable, now uses techniques popularized by Ace)

Header Subtitle Paragraph Styles

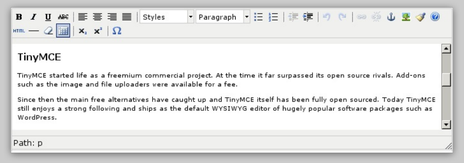
Explaining graphic design to four year olds

I recently offered to talk at the local primary school, about my job (or at least part of my job). I expected to be speaking to the older kids, and be able to talk specifically about the cool parts of the job, and maybe some of the sucky bits too, and how you get around them. However, I was asked to talk to a reception class (four and five-year-olds), and it turned out to be an interesting exercise in boiling down what you do, to its most basic elements.

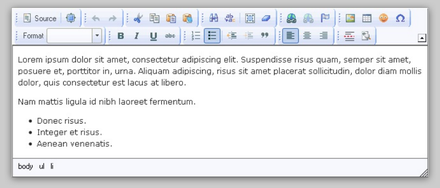
Firstly, I couldn't rest on my laurels and rely on some of the brands I've worked with, to win me any kudos, like it might with the older kids—"Yeah, I've worked for Channel 4, and the BBC, and

“I hate when I spend time trying to figure out something, get it working and then suddenly realize that it isn’t what I wanted in the first place…”

– My friend Thomas



TinyMCE
TinyMCE started life as a freemium commercial project. At the time it far surpassed its open source rivals. Add-ons such as the image and file uploaders were available for a fee.
Since then the main free alternatives have caught up and TinyMCE itself has been fully open sourced. Today TinyMCE still enjoys a strong following and ships as the default WYSIWYG editor of hugely popular software packages such as WordPress.
Path: p



Lorem ipsum dolor sit amet, consectetur adipiscing elit. Suspendisse risus quam, semper sit amet, posuere et, porttitor in, urna. Aliquam adipiscing, risus sit amet placerat sollicitudin, dolor diam mollis dolor, quis consectetur est lacus at libero.

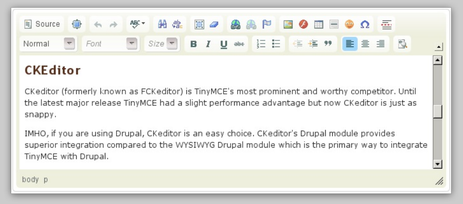
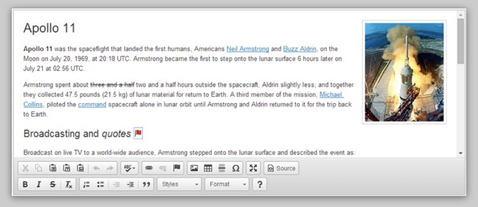
Donec risus.
Integer at risus.
Aenean venenatis.
body



CKEditor
CKeditor (formerly known as FCKeditor) is TinyMCE's most prominent and worthy competitor. Until the latest major release TinyMCE had a slight performance advantage but now CKeditor is just as snappy.
IMHO, if you are using Drupal, CKeditor is an easy choice. CKeditor's Drupal module provides superior integration compared to the WYSIWYG Drupal module which is the primary way to integrate TinyMCE with Drupal.
body p



Apollo 11
Apollo 11 was the spaceflight that landed the first humans, Americans Neil Armstrong and Buzz Aldrin, on the Moon on July 20, 1969, at 20:18 UTC. Armstrong became the first to step onto the lunar surface 6 hours later on July 21 at 02:56 UTC.
Armstrong spent about three and a half two and a half hours outside the spacecraft. Aldrin slightly less; and together they collected 47.5 pounds (21.5 kg) of lunar material for return to Earth. A third member of the mission, Michael Collins, piloted the command spacecraft alone in lunar orbit until Armstrong and Aldrin returned to it for the trip back to Earth.
Broadcasting and quotes
Broadcast on live TV to a world-wide audience, Armstrong stepped onto the lunar surface and described the event as:

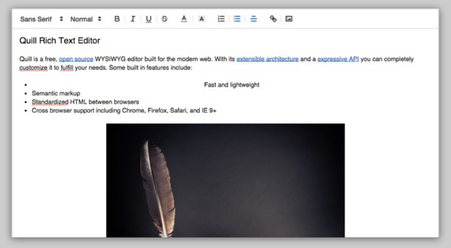
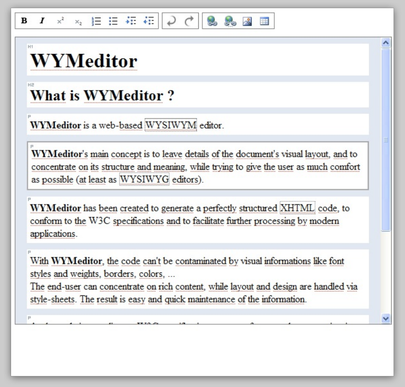
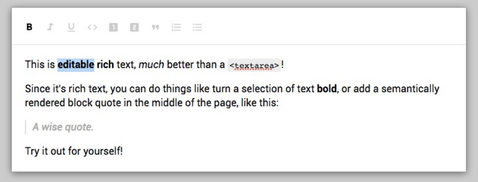
Using ProseMirror
This is editable text. Focus it and start typing.
To apply styling, you can select a piece of text and manipulate its styling from the tooltip menu. You get emphasis, strong text, links, code font, and images.
Block-level structure is manipulated through the "hamburger" menu to the right of the selected paragraph. This allows you to change paragraphs into headers or code blocks, to wrap them in lists or blockquotes, to unwrap them, and to insert things like horizontal rules.
Try using the "indent" item in the menu to wrap this paragraph in a numbered list.
And turn this paragraph into a code block.
When editing a collaborative document, this demo adds an annotation feature, which is also available from the selection menu. Annotated text shows up yellow. Put your cursor on it to see what it says.
To start playing with collaborative editing, select an instance ID from the input field above the editor.



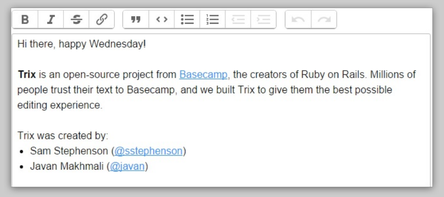
Quill Rich Text Editor
Quill is a free, open source WYSIWYG editor built for the modern web. With its extensible architecture and a expressive API you can completely customize it to fulfill your needs. Some built in features include:
Fast and lightweight
Semantic markup
Standardized HTML between browsers
Cross browser support including Chrome, Firefox, Safari, and IE 9+



WYMeditor
What is WYMeditor ?
WYMeditor is a web-based WYSIWYM editor.
WYMeditor's main concept is to leave details of the document's visual layout, and to concentrate on its structure and meaning, while trying to give the user as much comfort as possible (at least as WYSIWYG editors).
WYMeditor has been created to generate a perfectly structured XHTML code, to conform to the W3C specifications and to facilitate further processing by modern applications.
With WYMeditor, the code can't be contaminated by visual informations like font styles and weights, borders, colors, ...
The end-user can concentrate on rich content, while layout and design are handled via style-sheets. The result is easy and quick maintenance of the information.



This is editable rich text, much better than a <textarea>!
Since it's rich text, you can do things like turn a selection of text bold, or add a semantically rendered block quote in the middle of the page, like this:
A wise quote.
Try it out for yourself!



Hi there, happy Wednesday!
Trix is an open-source project from Basecamp, the creators of Ruby on Rails. Millions of people trust their text to Basecamp, and we built Trix to give them the best possible editing experience.
Trix was created by:
Sam Stephenson (@sstephenson)

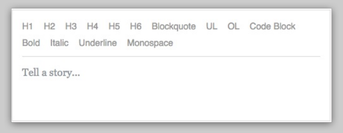
Chapter 1
Setting the Foundations
The human race is a naturally inquisitive species. We just love tinkering with things. When I recently bought a new G5 iMac I had it to bits within seconds, before I'd even read the instructions. We enjoy working things out ourselves, creating our own mental models about how we think things behave. We muddle through and only turn to the manual when something goes wrong or defies our expectations.
One of the best ways to learn CSS is to jump right in and start tinkering. However if you're not careful you may end up misunderstanding an important concept or building in problems for later on. In this chapter I am going to review some basic, but often misunderstood concepts, and show you how to keep your (X)HTML and CSS clear and well structured.
In this chapter you will learn about:



H1 H2 H3 H4 H5 H6 Blockquote UL OL Code Block
Bold Italic Underline Monospace

The future of authoring tools

Probably not a word processor

“How do people cope with disorder? The answer lies in the phrase ‘underlying structure’. My desk looks chaotic and incomprehensible to anyone who is unaware of the reasoning behind the many disparate piles. Once the structure is revealed and understood, the complexity fades away. So it is with our technology”

– Don Norman

The problem is the level of abstraction

We need a more fundamental building block for rich text

Part 3

If not a word processor then what?

Outliners

Two criteria that makes something an outliner:

- you can reorganize according to the structure of the information
- you can control the level of detail in display of information

For manipulation software, interaction is perfectly suitable: the user views a visual representation of the model, considers what to manipulate next, and performs a manipulation. The software, in turn, inputs the user's manipulation request, updates the model, and displays the updated representation. With good feedback and an effective means of "speaking" to the software, this process can cycle smoothly and rapidly. It mimics the experience of working with a physical tool.

Intro FAQ Contact

Simple Collaborative Web Pages

Traditional web pages are static, published, read only. To write back requires server code.

On Concept, every page is live. Anyone can read or write, in real time. Web pages aren't documents, they're shared spaces.

Layers contain many properties that define their appearance, such as opacity, rotation and scale. Layers can also be nested to adjust their hierarchy.
To create a layer, use the new keyword. Every layer has a set of default properties: a blue background, and a default width and height of 100.
A unique identification number for this layer. No other layer will have this number. The layer id is read only and cannot be changed.
The name of a layer. Layers aren't named by default. Imported layers will inherit the name you've defined within Sketch or Photoshop.
Animate layer properties like scale and color with various

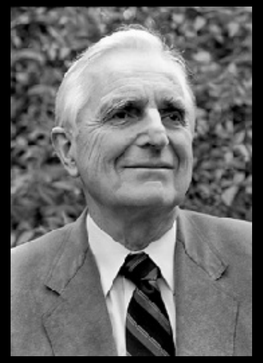
Nelson: In other words I take, I take Pac-Man to be the prototype of the office systems of tomorrow, not these obtuse, tiresome word processors and outline processors and spreadsheets, but Pac-Man which has real interaction, immediate feedback, color and sound, and is self revealing as different aspects of the design become clear to the user.

The future authoring tools will

- Target the Web
- Have an interaction model somewhere between an outliner and a word processor
- Change how we think of documents



“I sometimes feel that my work over the past 20 or so years has been a failure. I have not been able to get funding and I have not been able to engage anybody in a dialogue.”

– Douglas Engelbart

We have an opportunity

The process of imagining what these tools can be is extremely important

“None of us are born knowing how to write software.”

– Rich Hickey

“The better we get at getting better, the faster we will get better”

– Douglas Engelbart
